

BULL SALE

17 July 2026

FERTILE | GENTLE | GROWTHY | ADAPTED | **BRAHMANS**

HELMSMAN ADAPTED SYSTEM

Original Helmsman Bid System created by Bruce Milne.

Buying commercial herd bulls this way combines useful features from auction and private treaty systems. You have the opportunity to bid on, and buy any bull in the catalogue at a competitive market value without pressure.

1. On arrival, intending purchasers register at the bid table and receive a Bid Number.
2. All bulls are penned for inspection, by category, as per the catalogue.
3. Opportunities abound. At 9am, all bulls are on the market simultaneously. You bid on any lot, regardless of catalogue sequence, by lodging a bid slip with a "runner". Having reached your price limit on a bull, you simply move onto your next selection of bulls anywhere in the catalogue.
4. From 9am buyers' opening bids will commence, starting at the base price written on the bidding boards. Further advances at a minimum bid value (as per the coloured schedule at right). There is no upper limit on the bids.
5. Bids are recorded on every bull, showing 'buyer number' and \$ value, on large boards, by category, in the central hub of the bull yards.
6. A bid, once submitted and recorded, is the responsibility of that bidder.
7. Coloured Timetable (see right).
At set times during the day, bulls with no new bids for a set period, will be deemed sold, as per ink colour. This helps multiple buyers, by designated times, to know they have secured their tally. It also enables some clients to exit the sale by 2.30pm, confident that their purchases are secure.

THE BENEFITS

NO SPLIT-SECOND DECISIONS. You have time to consider, to select and place deliberated bids on the entire catalogue.

By 1pm, buyers will know their core tallies with ample time to re-select other bulls, or advance bidding without auction pressure of instant decisions.

Re-selection is easy, as the yards are full of very similar genetics.

Buyers of groups of bulls with Helmsman gives broad choices, flexibility and time to average your budget.

9am to 12 noon

Bids of **\$200** or higher.
All bids will be recorded in **BLUE** pen

12 noon to 1.00pm

Bids of **\$300** or higher.
All bids will be recorded in **RED** pen

At 1pm

Any bull price remaining in the original pen colour of **BLUE**, will be **deemed officially sold** for the amount listed to the buyer listed.

Lunch 1.00pm to 1.30pm

All bidding will be suspended while we enjoy some lunch.

1.30pm to 2.00pm

Bids of **\$400** or higher.
All bids will be recorded in **GREEN** pen

At 2.00pm

Any bull price remaining in the original pen colour of **RED**, will be **deemed officially sold** for the amount listed to the buyer listed.

2.00pm to 2.30pm

Bids of **\$500** or higher.
All bids will be recorded in **PURPLE** pen

At 2.30pm

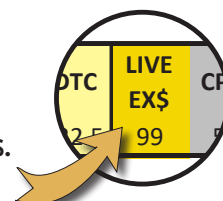

Any bull price remaining in the original pen colour of **GREEN**, will be **deemed officially sold** for the amount listed to the buyer listed.

At 2.30pm

Any bulls in **PURPLE** pen will be individually, verbally listed and further bids will be taken at this time in an open auction (to enable sale closure in reasonable time).

GO FOR GOLD!

CBV Terms and Conditions of Entry and Sale | 16-17 July 2026

CBV will invoice after the sale, with payment due up to 30 days from invoice date.

All bulls are sold as herd bulls for commercial use only, and not seed stock use.

All semen rights remain solely with the vendors.

Freight cost, insurance and NLIS transfers are the responsibility of purchasers.

Sale format: Helmsman bid system.

Delivery: CBV will help coordinate delivery of joint loads where possible.

CBV takes no responsibility for bulls in transit.

Injury to persons or property: All persons attending the sale do so at their own risk, and the sale principals assume no liability or responsibility, legal or otherwise, for any accident or injury that may occur.

Thank you for blessing us with your presence and participation at CBV.

and His harmony in bringing it all together”*

Abundance beyond measure

2026 Welcome

Fields of Gold

Welcome to Simple Abundance.

Fertile, Gentle, Growthy, Adapted Brahmans.

The mystery of the CBV genetic effect....
“WHY IS IT SO?” (Prof Julius Sumner Miller)

Mark Twain observed “*THE FUTURE IS MIGHTY
IMPORTANT, ‘COS WE GOTTA LIVE IN IT*”

We can study the building blocks of CBV thus far....

Assess the results with a critical mind.....

**Now.... Our minds need to cast
intently to the future.**

CBV is vitally interested in constructive thinking,
THEN PUT IT TO WORK.

Cosmetics in cattle have no place here. There is
very little substance in a fashion parade.

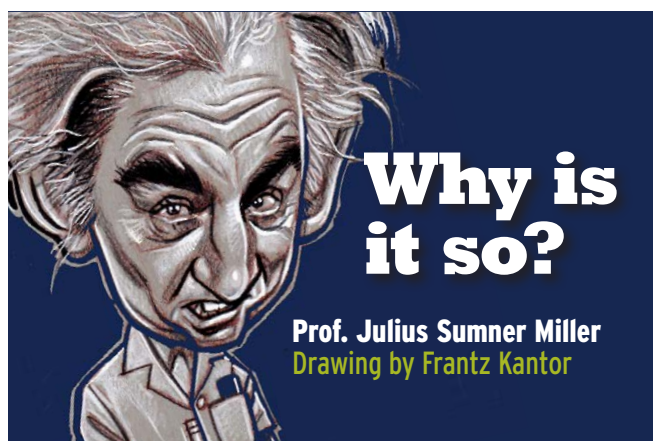

Amazingly the cattle here still look just like cattle,
quieter than most, and fleshy, quick to grow.

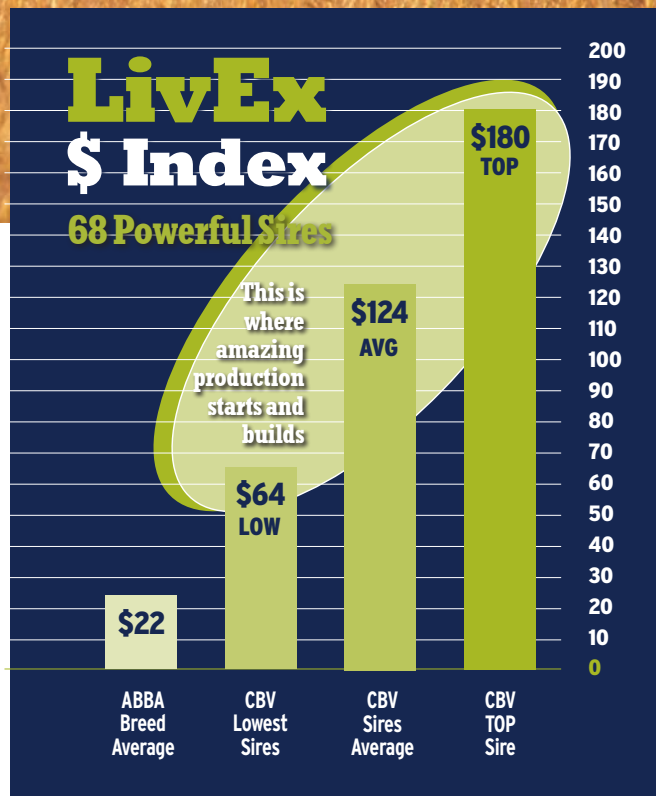

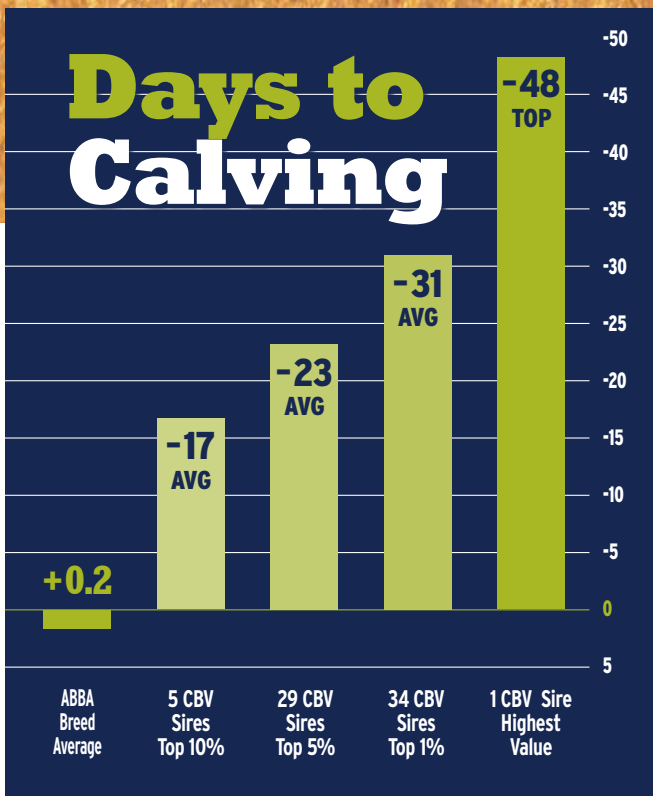

The top ranked Brahmans are dominated by CBV
with the key indicators for profit being Breedplan
EBVs for Days to Calving and LivEx\$ index EBVs.

The Top 25 proven sires for both traits live at CBV.

After 46 years of breeding and analysis, the
results are beyond doubt in a global analysis.

Why is it so?

- 1 No tolerance of free-loaders. (failures convert to success as Cash Flow)
- 2 Selection under duress or deprivation. (heavy stocking rates regardless of season)
- 3 Continual measurement for meaningful traits. (46 years has meaning.)
- 4 Seeking scientific and practical advice across species, globally, and applying it.
- 5 Failing, learning from that, and accelerating our efforts.

- 6 Common sense and observation.
- 7 A healthy disdain for convention. 'The straitjacket of political correctness.... makes it impossible to think'. (Bill Leak)
- 8 A very high respect for Creation and Natures laws.
- 9 Humility and determination.
- 10 Honouring all who came before us, whilst we hunt for the future. (Remember Mark Twain)

The above metrics have been applied with deliberate intent during the development of CBV.

Cost of production is reflected in cost of food.

Cost of food is reflected in consumption and real prices.

Ignore cost of production at your peril.

Profit per land unit is governed by reproduction.
ON TIME AND AT LOW COST.

CBV clients experience high yielding growers and fatteners. Efficient cattle anywhere.

Now it's time to consider 'why is it so'.

All these charts remind us of the importance of the effect of low-cost and high reproduction.

Within every herd there will exist some amazing genetic potential for 'profit progress'.

Because of the wide disparity in the Brahman breed, we recognised that we could make progress.

'The straitjacket of political correctness.... makes it impossible to think' Thanks Bill Leak, cartoon-ist.

We had observed 40 years ago that some cows calved in the first month repeatedly, and many of their daughters also, with matings starting 1 October, in the dry season, and calves swinging off them. These cow families have continued to multiply and climb the production analysis charts, especially by mating hundreds of sons of these super-cows across the whole herd.

Freedom... JBP

Freedom is; Not the ability to implement your whim

Freedom is; Taking on your responsibilities.

Responsibility is; Doing what you ought!

Responsibility is; Selecting the heaviest load you can, to move it forward.

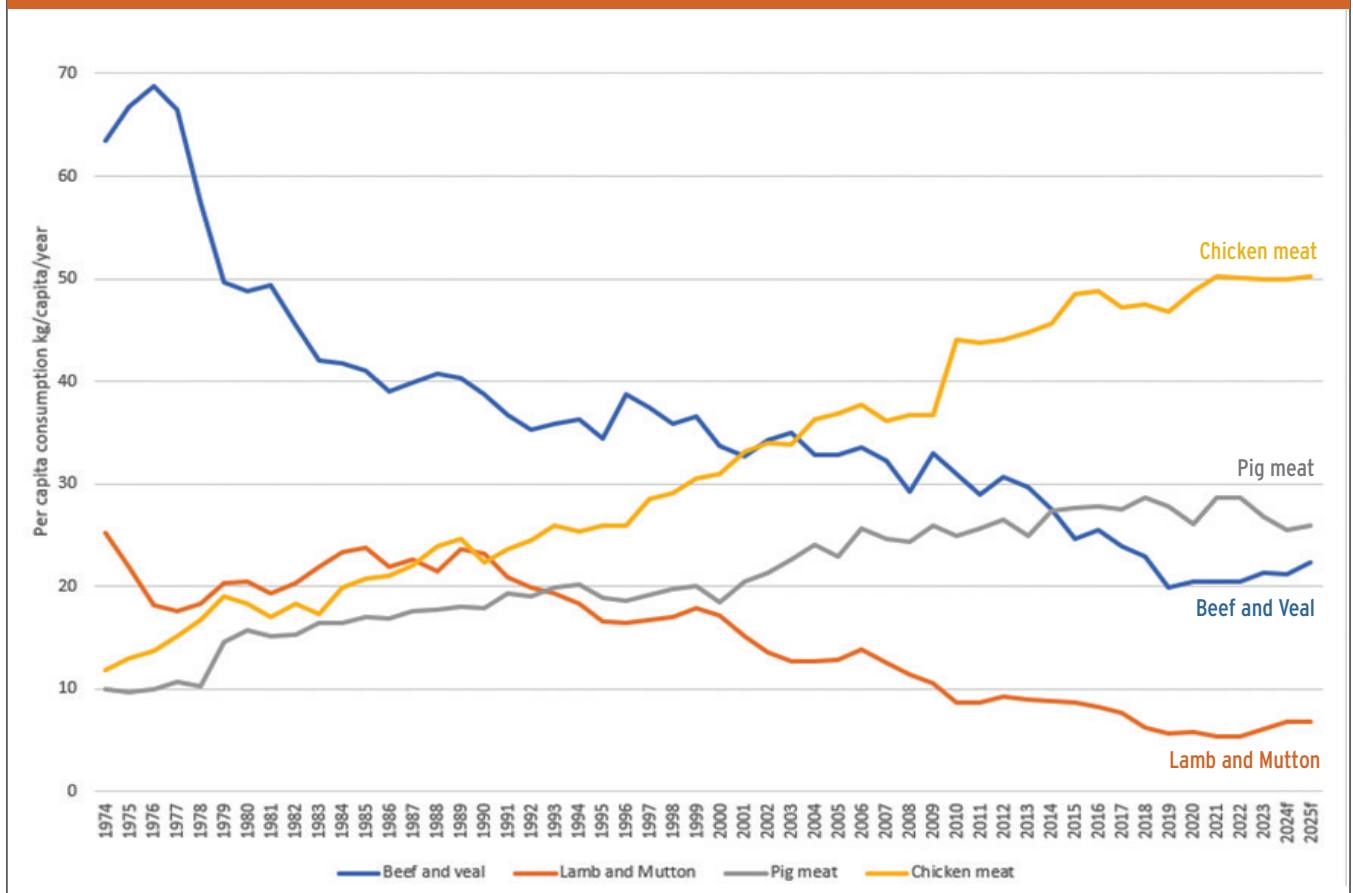

Maximum freedom.

Maximum responsibility.

Adoption of discipline.

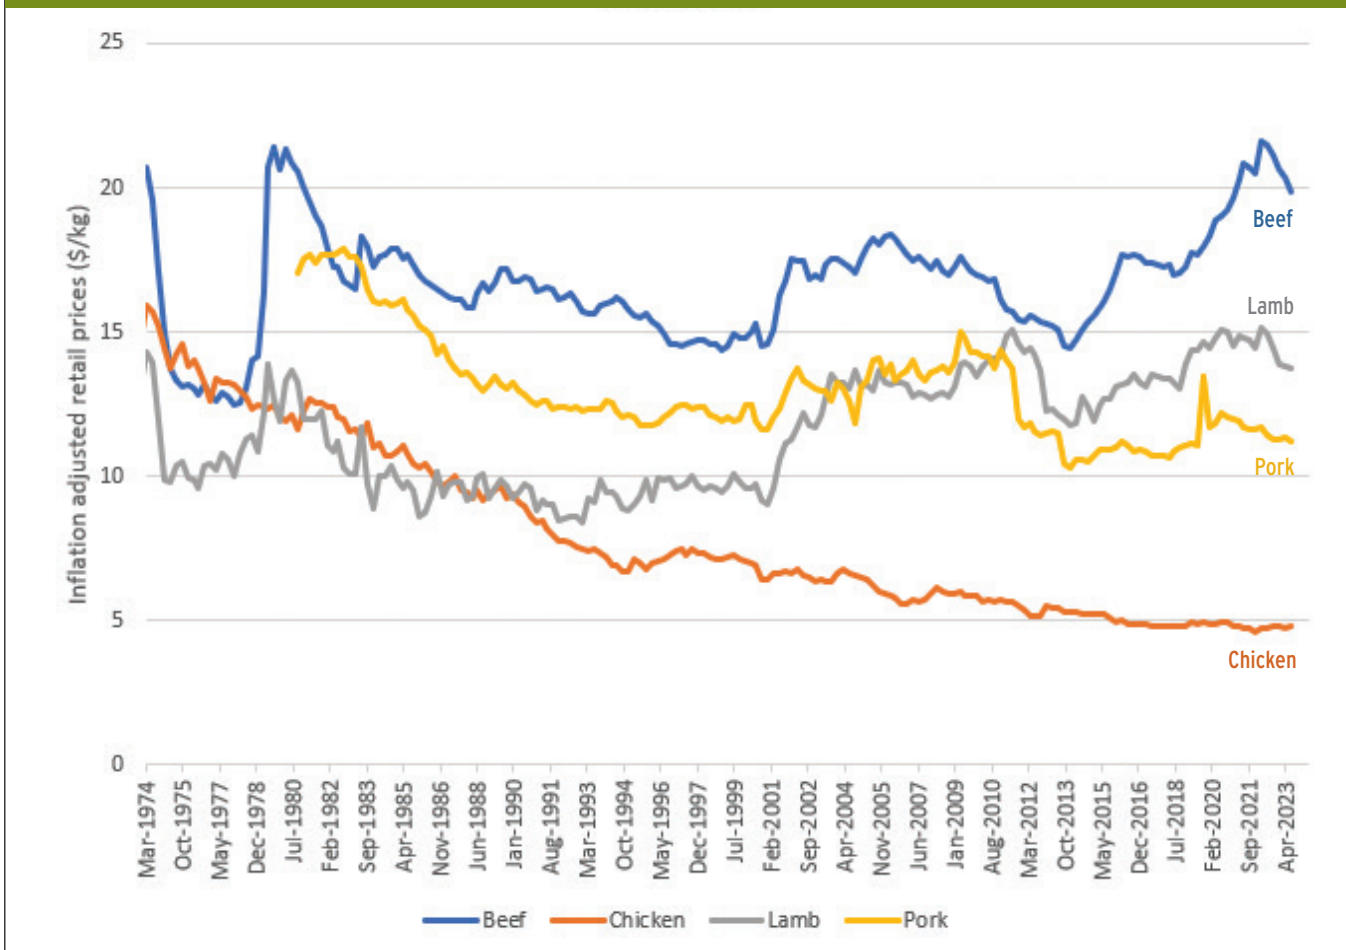

Dr Jordan Bernt Peterson. Canada.

Per capita consumption

Thank you to analysts at Rabobank for these 50 year tracking graphs

Real Prices

About 1984 Dr Michael D'Occhio was introduced to us, ('you young fellers need to get your heads together') by Dr John Vercoe, of CSIRO Rendall Laboratory. The hallmark of great minds to encourage collaboration really shone out of Vercoe, D'Occhio, Baruselli, and Kinder... Courage!

Emeritus Professor D'Occhio is a reproduction physiologist and endocrinologist, currently at University of Sydney. He also lectures and collaborates in Italy and Brasil.

He is a constant source of foment of new and innovative thinking. He has been of huge encouragement to CBV for 42 years, with constant introduction of other highly qualified academics from many countries.

They included Dr Sep Vogelmeyr (Austria), Dr King (Canada), Prof. Jim Kinder (USA), Dr Larry Cundiff (USA), Prof Pietro Baruselli (Brasil), Prof Campanile, and Dr Limone (Italy).

Dr Ken Rowan, (Aust), Dr John Vercoe and Dr John Frisch, (CSIRO), & Dr Tom Rudder, (QDPI) all shone as valued mentors since 1970s.

Consider the two charts of uterine survival, and attached notes. [See overleaf](#)

Hunting for the productive ones.

CBV created 5 Speed Bands by tagging all new calves monthly, and created distinct mating groups. They became C1 to C5 mating groups from 1995.

Later they became Alpha, Bravo, Charlie, Delta, and Echo. Over 30 years of Speed Bands!

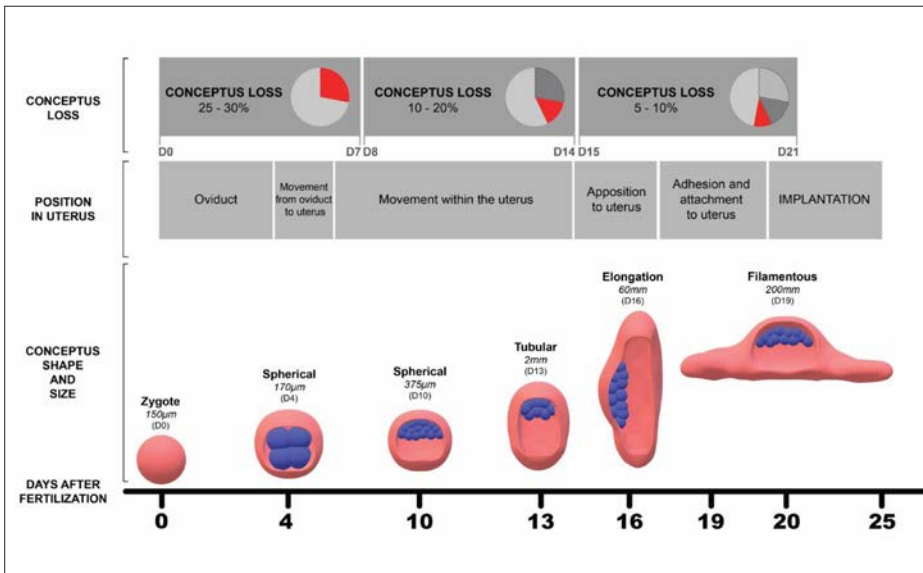

We already had birthdates and weights since 1981. Practical illustrative tools...!

Because there was no genetic analysis for reproduction in the Brahman breed, we analysed using Excel spreadsheets, mapping movement of all rebreeds for about 15 years.

Some females retained their spot in a Speed Band, others drifted around earlier or later, and some fell out to be cash flow.

All the while discussions were going on with CSIRO, Universities, DPI, and AGBU, the genetics group at UNE, led by the wonderful Dr Hans Graser.

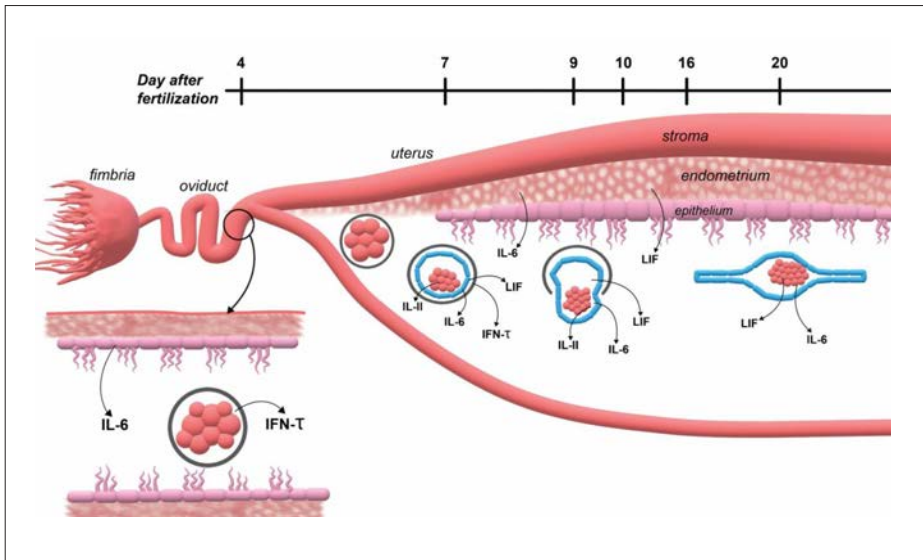

In common, none of the inspirational people listed were limited by the straitjacket of conformity, or political correctness.

TOP LEFT:

Fertilisation rates in cattle are in the order of 85-95%. However, 40-60% of embryos do not survive to day 21 when attachment of the embryo to the uterus has commenced. This represents a huge reproductive loss that often is not recognised. A deeper understanding of why so many embryos fail to establish a pregnancy, and the identification and selection of females with high embryo survival, would be a major improvement in reproductive efficiency.

Authors: Prof Giuseppe Campanile, Dr Antonio Limone, Prof Pietro Baruselli, Prof Emer Michael D'Occhio
Graphic: Dr Fabio de Moraes Francisco
Theriogenology vol 167, p 1-12, 2021

BOTTOM LEFT:

In cattle, the embryo enters the uterus at around day 5 after fertilisation. There is a lot of communication between the embryo and uterus and some of this crosstalk involves immunological factors such as interleukin-6 (IL-6) and interferon tau (IFN- τ). The communication is important so that the uterus does not reject the embryo, and maternal recognition of pregnancy is achieved. A deeper understanding of this communication would lead to the identification and selection of females that have a uterine environment that supports the developing embryo.

Authors: Prof Giuseppe Campanile, Dr Antonio Limone, Prof Pietro Baruselli, Prof Emer Michael D'Occhio
Graphic: Dr Fabio de Moraes Francisco
Theriogenology vol 167, p 1-12, 2021

At Animal Genetics Breeding Unit, AGBU UNE Dr Steven Barwick was legendary; Tier, Henzell, Goddard; all of integrity, focused on the future.

EBVs for DTC, (Days to Calving) were developed, and fed into LivEx\$ Index EBVs.

CBV played a significant role in this in practical terms, with accurate long-term data, plus a willingness to continued validation; underpinned by a relentless and disciplined focus on cow/calf efficiency for progressive commercial gains.

Alongside this activity was Jack Allen at ABRI at UNE. He devoted his clear thinking, and massive work ethic to validation and consolidation of the great Breedplan reporting and analysis.

Later we invested in genomic validation, with UQ QAFFI Prof Ben Hayes, another Vercoe protégé, collecting 3500 bloods to search for informative reproduction gene markers at CBV.

This was inspired by Prof D'Occhio, with Prof Mike Goddard, Uni Melb. The result broadly was 80%+ of CBV females had one or two copies of a particular variant of the Plag1 gene.

This variant of Plag1 was associated with earlier ages of puberty and first calving event.

In cattle, the Plag1 gene is most highly expressed during early foetal growth which is thought to help set an animal up for lifetime performance

The downstream effect of 'earlier to work' females is a real lift in herd efficiency per land unit.

Of 40,000 samples from Brahman breeders across Australia, only 10 to 15% had copies of this particular Plag1 gene.

None of these results are accidental. Solid results are the result of focusing management on meaningful stuff.

Nett results of all that stuff has morphed into multiple mating of all groups at CBV.

DNA mapping and genomics help a great deal. This has been policy since 2011 over the whole herd. Data is strong, confirming Pompes free status, parentage, and poll gene.

Sire groups of between 8 to 30 sires are used, over heifers and cow mobs.

All calves are gene-mapped, using 50 SNP chips, to enable this process of identifying competence for both ***capable sires and willing females.***

The Genetics Marathon. Progeny from these matings are allocated to their sire, and average number of calves weaned per sire. We are aggressively hunting for super-sires, and super females en masse.

Their 'progeny ratio' above and below average is expressed as a percentage.

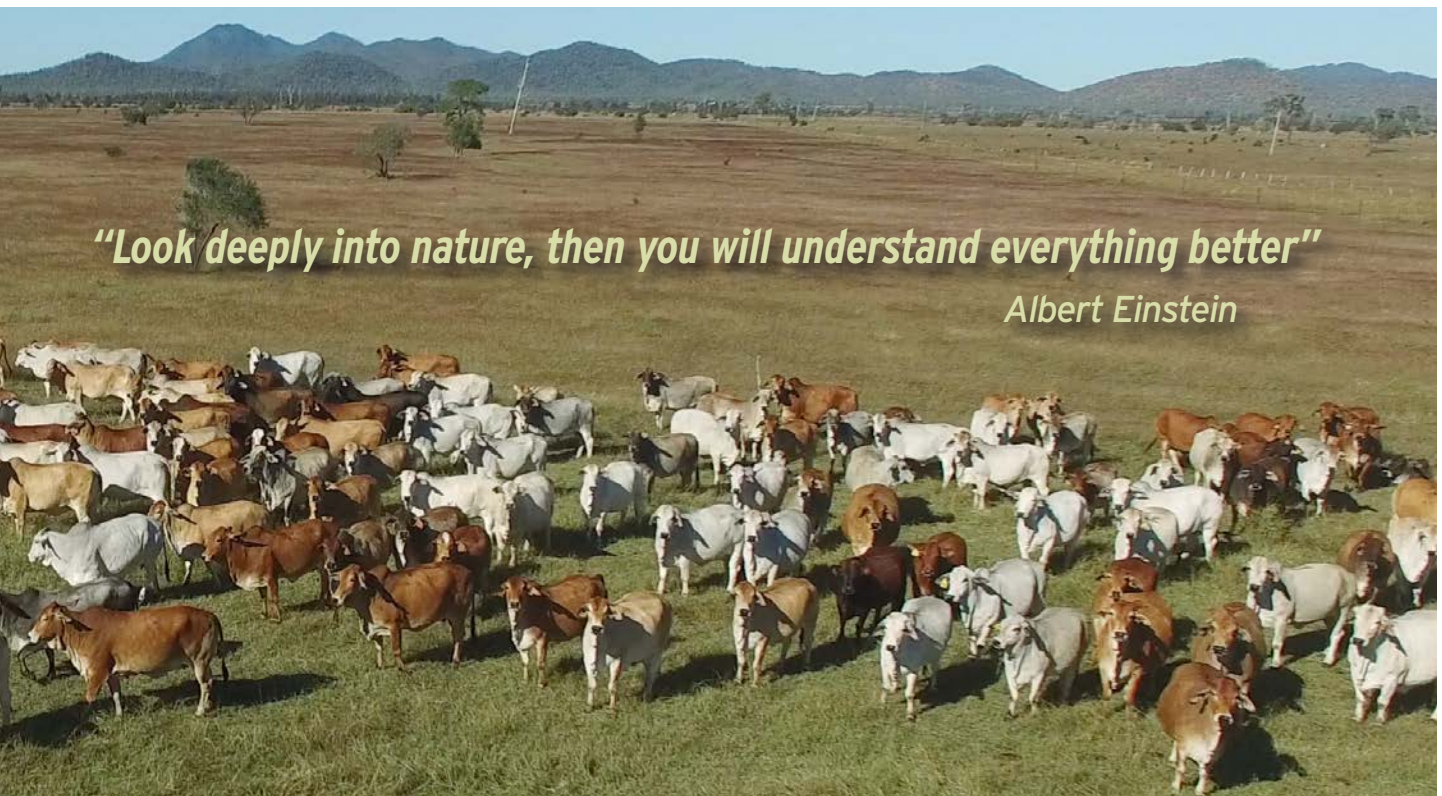

The best sires range from 200% to 600%.

AGAIN, "WHY IS IT SO?"

Bear in mind that data collected from maiden matings determines that only the subsequent elite super-sires are then mated over CBV cow herds.

"Look deeply into nature, then you will understand everything better"

Albert Einstein

We also do random validation matings of outliers.

Perhaps it is worth noting that CBV has over 400 polled females mating, and superb poll sires.

My daughter Victoria only mates poll CBV bulls, enjoying a high level of success also at 1VV.

A trend is emerging that juvenile males are exhibiting stronger testicle tone and development at earlier ages, and lighter weights over the last 10-15 years.

Age-at-puberty in bulls is associated with puberty and lifetime fertility in their female progeny.

This is highly important when selecting for fertility... This is not about testicle size, but **rather how quick** to a threshold of maturity under duress.

An interpretation of what has occurred at CBV is that the unrelenting selection in bulls has resulted in female cattle that have early puberty, and increased lifetime fertility.

The testicular data is obtained with calipers under harsh conditions and light weights on a monthly schedule for usually 7 months.

The result, herd-wide, is encouraging and rewarding for 35 years of testicle interrogation.

I doubt that it can be duplicated ethically in an affluent grazing or feeding regime.

I attribute a lot of CBV progress in genetics and productive traits to this factor of selection under duress. This is not a new phenomenon. Just study livestock survival gains historically.

We are hunting for genuine reproduction marathon runners during decades of measuring

and analysis. **'The CBV Petri dish of adapted cattle breeding'**. That is a real joy.

This takes a degree of courage, fortitude and vision in the wonderful people that have put their collective shoulders to the wheel with, and at, CBV. Marathons are not easy or simple to run.

A trend seems to be emerging that sons of super-cows are reflecting well in progeny ratios. This raises the question of mitochondria, and expression of epigenetics.

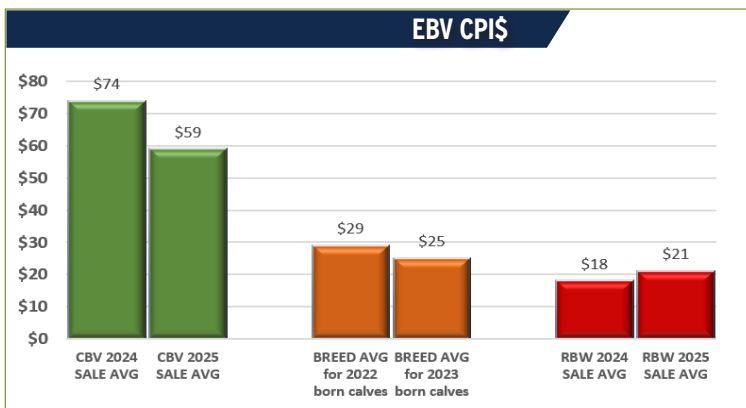

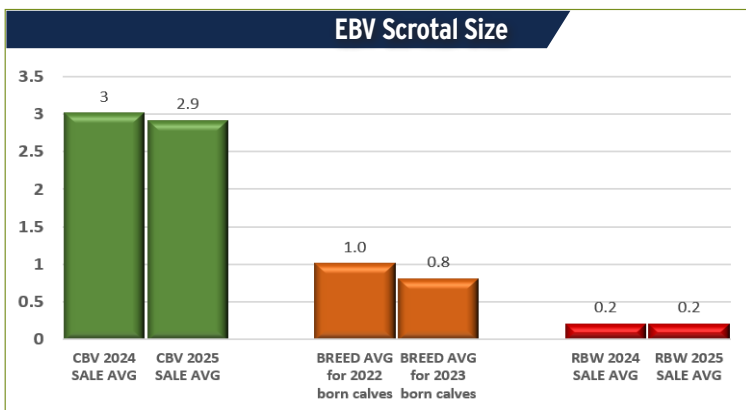

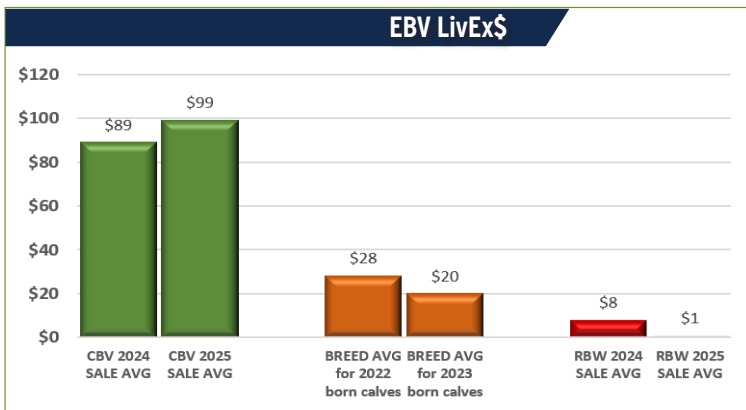

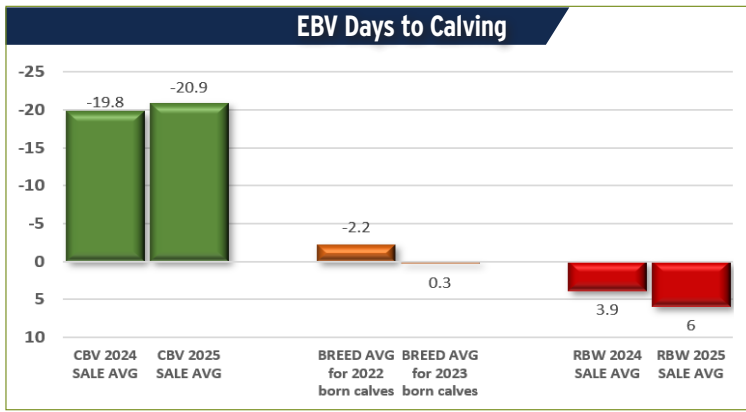

Results so far are encouraging to continue analysis under duress.

Aggressive multiple matings are part of this progress. This is Natural science expressed at its best, to benefit commercial production. Gods plan works remarkably well. Just observe and apply!

46 years of continual improvement is a marathon proven now to be worthwhile. CBV is a working example of applying some extremely complex science, simplified by focused management.

Importantly I want to honour my father's development of early Brahmans at Wandilla for 15 years from 1956 to 1970. There were very few Brahman herds in Australia in the 1950s, all owned by pragmatic independent thinkers and collaborators. **This period could well be described as revolutionary, and 'jet-speed evolutionary'** in the Australian beef industry. Fathers vision and foresight was definitely not popular, but certainly essential for future prosperity. That was an exhilarating wave to ride, in hindsight, during my 8 to 22 years of age.

The CBV herd grew from 1981 built on father's awesome development.

CBV is heartened by the commercial progress made in clients herds both large and small, in most regions of Australia. They are a special group of perceptive and curious minds. They demand results in commercial terms, achieving some wonderful outcomes, by their own rigorous management, and applying CBV bulls and philosophy, in some cases for forty years.

I have covered a long period of time and concentrated effort, to illustrate that not one piece of the program ought to be dropped out.

That includes our failures; when we are forced to self-examine, accelerating our efforts to make up for lost time, lost revenue, and wasted cow-days.

It is my intention that what thoughts and examples we have shared here can be illustrative and encouraging to all who care to read and digest the substance. This is not proscriptive, nor a recipe, but I hope goes some way to illustrating 'Why is it so?'

There is no 'silver bullet'; more like doing lots of small things well and relentlessly.

Probably a lot like common sense and hard work. That journey sure has been fun.

Common sense is irreplaceable.

In my own case, I know how much I have benefitted from gentle and persuasive encouragement to the next level of thinking, by respectful friends and mentors.

Practical men and women, and brilliant scientists in many countries, have gone out of their way to stimulate our enquiring minds; sharing their lifelong experiences.

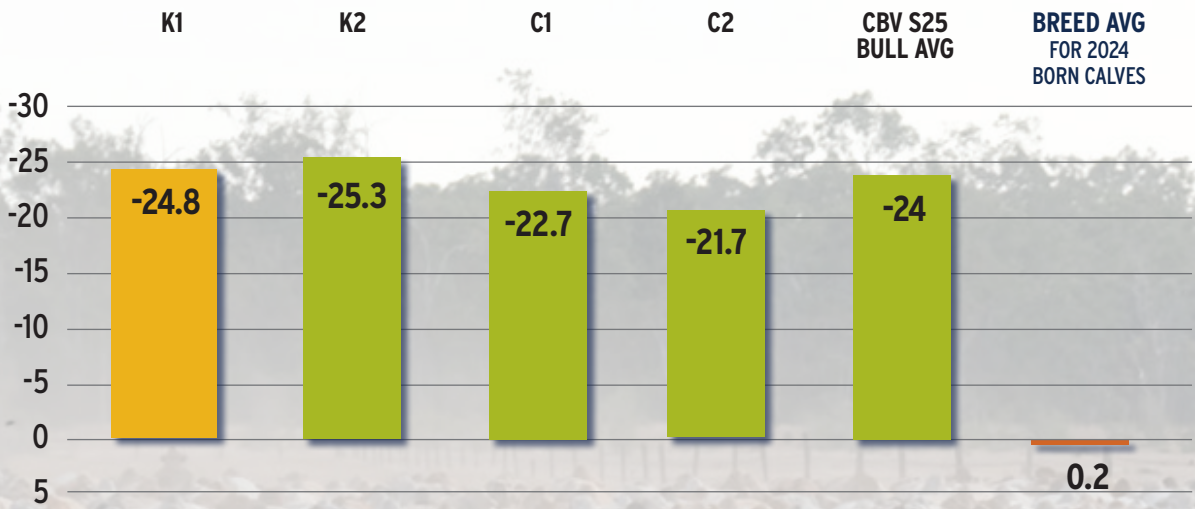

My respect for the strength, courage, kindness, Faith and example set by my wonderful parents, in retrospect, still grows. Blessings abound in this simple abundance.

**'Why is it so' still applies.
The future demands 'Let's keep at the task.'**

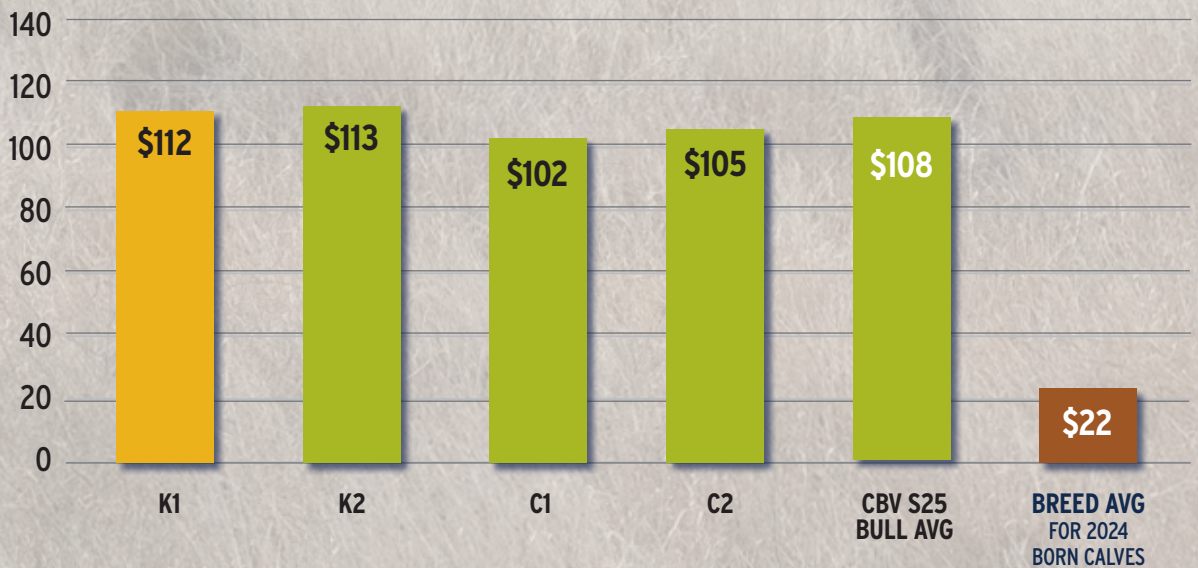

Sincerely, Alf Collins CBV, July 2026

DISCOVER >>>

CBV THE BREED WITHIN A BREED

High efficiency Brahmans. Adapted beef cattle. No doubt about it.

CBV has **never** tried to prop up our search for meaningful genetics by light stocking rates, rich diets, or extraordinary country.

We do find true marathon runners in genetic terms.

Our policy of 'no freeloaders' has borne fruit.

All other vendor's cattle including heifers on coastal country.

CBV stock-days per hectare per 100 mm are quite extreme.

CBV 'speed bands' for mating are illustrative and transparent. (C1 to C5 digitally)

Speed Bands are; Alpha, Bravo, Charlie, Delta, and Echo, in phonetics -

the ABC of genetics at work on grass.

Learn more about these ABC structures by calling CBV.

There are no shortcuts, no quick fixes - more a matter of doing lots of small things well... Relentlessly!

So... CBV focuses on

- what we can influence,
- what we can change.

In genetic terms, the results of tight management are bearing fruit.

CBV people are architects of change.

For commercial results... **off grass...**

46 years of super selection.

- 46 years with no tolerance of freeloaders.

Focused only on genetic progress. Always at low cost... always!

CBV - THE INTERNATIONAL BENCHMARK FOR BRAHMAN

Cows with * in the ICI column.

These are merit cows that failed to wean at CBV and continued to breed in daughter herds.

Note regarding Polled, Scurred, or Horned in Catalogue.

Polled, Scurred and Horned status is confirmed by DNA for CBV, 1VV, RW and WF.

Honouring Emeritus Professor Michael J D'Occhio.

Intensity, purity of intent, courageous in hypothesis; a true scientist.

Having migrated in 1957 with his parents and sister from Italy, their family values and culture are a hallmark of this notable scientist.

Michael graduated from University of Adelaide, with a Ph.D. in his field of Reproduction Physiology, and Endocrinology.

He shared a joint appointment at the University of Nebraska, and Roman L Hruska Meat & Animal Research Centre, USDA Clay Centre, Nebraska USA, for three years.

He was then endowed with a Post Doctoral fellowship at University of Adelaide, which earned him a key role at CSIRO Rendall Laboratory at Rockhampton.

Dr John Vercoe at CSIRO was a profound mentor, with encouragement and opportunities.

Michael later served at Central Queensland University, and University of Queensland. He is current at University of Sydney, University of Naples, and University of Sao Paulo, Brasil where he was endowed with the prestigious title of Emeritus Professor.

He is a clear communicator with intellectual candour, stimulating all who know him.

Michael is a modest man, committed to the progress of mankind. His kindness and generosity of spirit is boundless. For over forty years, CBV has been in collaboration with Michael D'Occhio and looking forward to even greater inspiration from his youthful exuberance.

We are privileged to have shared in his vigorous scientific pursuits, and certainly give great credit to Michael for the trajectory of **CBV genetics, expressed as commercial competence.**

The Helen Newton Turner Medal

Alf Collins Snr, one of the most innovative beef cattle breeders in the world, was awarded the prestigious Helen Newton Turner Medal for 2017.

The Helen Newton Turner Medal perpetuates the memory of an outstanding sheep geneticist, and a fine Australian. The Medal is awarded to provide encouragement and inspiration to those engaged in animal genetics.

Building on the foundations established by his father, Alf Collins Snr has applied enormous dedication, careful recording and rigorous focus on breeding for profitability, to the continuous improvement of Brahman cattle in the Collins Belah Valley (CBV) herd.

Brahman cattle have to perform in very challenging environments, and breeding programs to deliver genetic improvement in those environments are challenging too - reflecting large scale of operations and variable climatic conditions.

Alf has met these challenges head on and collected performance records underpinning reliable EBVs and used the information backed by hard-nosed practical understanding of functionality and survival ability, to generate very impressive genetic progress over several decades. Perhaps the most outstanding aspect of that genetic progress is that it includes very substantial progress in female fertility - something that has effectively been treated as 'too hard' by most breeders of tropically adapted cattle world-wide. CBV has actively participated in industry R&D, including significant contributions to beef CRC I, II and III.

Alf is a deep thinker about what cattle need to do in the tropical environment, and has never been afraid to try novel approaches or include new traits if they will help breeding cattle better and better suited to the environment and to improving profit.

Alf continues to be an outstanding pioneer and innovator in real-world application of genetics technology, and the demonstration that it is possible to breed genetically fertile, productive and profitable tropically adapted cattle is an inspiration.

Alf Collins Snr received the Helen Newton Turner Medal at the Association for the Advancement of Animal Breeding and Genetics (AAABG) conference in Townsville, Queensland on Wednesday 5 July 2017 and delivered the Helen Newton Turner Oration following the presentation.
